Indiana Example: Vincennes University’s Logistics Training and Education Center (LTEC) Initiative project produced and shared supplemental resources for their APICS Global Logistics Associate (GLA) Certificate program.

Ivy Tech Community College (Bloomington), a Community College Consortium for Bioscience Credentials (c3bc) member and lead college for c3bc’s Medical Device Hub, led a three-year development process with industry and consortium partners to create the first set of skills standards for entry-level technicians in the medical device industry. The college also created a national model for community college medical device training labs through its purchase of state-of-the-art injection molding, thermoforming, and plastic extrusion equipment, and the development of a new plastics technology program for medical device manufacturing.

“The TAACCCT grant significantly enabled the Logistics Training and Education Center to build capacity...[such as] the hands-on warehouse, which will allow us to continue to provide high-quality programs that combine classroom instruction with real-world hands-on experience.”

Angela Dougherty, Project Manager
